

Disgusting Web Ad

At this stage is about 3 to 4kg in weight. The glasses shape around the eyes in the ADULTS do not form properly until 3 months of age. By the time they are 6 months of age they should adapt their nick name sake "**THE SMILING DUTCHMAN**" which infests itself with a broad grinning grin and smile with showing of teeth. No it does not mean he is angry but that he is very ecstatic to see you and they are a clown of the canine world and when punishment time is handed out it is hard for one of us not to laugh and it is almost impossible to get angry with the Keeshond even an adult as they will bluster their way out of a situation and being in the top 5 most intelligent dogs they are experts at bluffing their way out of trouble and they know when they have done wrong. Keeshonds love to touch each other and humans by reaching out like giving a hand for handshake greeting and is another typical aspect of the breed. They are very cat like in that they clean themselves regularly and are classed as a water dog. Hence you need plenty of water in cat trays or a pool as they love the water very much.

We have one puppy right now we call him **SWAMPY** and he is in the water bowl splashing all the time. They are used for finding humans buried in the snow and are good drug finding dogs as well. They can live in very small areas and do not need a lot of exercise. Normally a Keeshond has had plenty after 20 minutes of fun and will usually sleep it off after.

Okay that is it for now and hope you can get the history on the breed for all Filipinos because this breed is not there and yes it is a cold weather dog but will climatise well to the **Philippines** weather so long as every now and then one brings them into the airconditioned room or outside swimming area or paddle of pool is there for them to cool off.

First in with the breed there will benefit very much and this dog will become popular I am sure and the hair does molt and one can collect it and weave and make clothing as it is non allergenic and sought after.
